Here is a copy of a modification that is applicable to the set of four Miura 3C Webers
Reportedly helps to eliminate the potential for carburettor fires:

*Sul coperchio di ciascun carburatore occorre praticare N°4 fori di sfiato di $\phi 1,5$ come indicato in figura.
Eseguita la modifica Vi preghiamo di contrassegnare ciascun carburatore con un bollo di vernice verde.*

FERRARI ASSISTENZA TECNICA

On each carburettor cover you will need to drill 4 each, 1.5mm diameter holes as shown in the above figure
After the modification, please mark the carburettor with a green spot. FERRARI ASSISTENZA TECNICA

*On each carburettor cover it is necessary to drill N°4 breather holes as shown in the enclosed drawing.
After the modification we kindly ask you to mark each carburettor with a green painted spot.*
